### Outdoor Lighting Alteration Compliance Considerations

**Retrofitting luminaires:** If retrofitting an existing luminaire with new technology (i.e., rewiring HID shoebox with LED technology) in which the fixture head remains, it is not considered an alteration unless the connected load is increased (see below). If the fixture head is being replaced, but the pole is remaining, this is considered a luminaire alteration and may trigger code based on the following:

<table>
<thead>
<tr>
<th>Replacing/altering ≤4 luminaires, or when ≥5 but &lt;10% of luminaires, on the site:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Since this type of project does not trigger all aspects of the Energy Code (controls and wattage allowance), it does require compliance with the Backlight, Uplight and Glare (BUG) (cutoff) requirements of §130.2(b) when the luminaire is ≥6,200 lumens.</td>
</tr>
</tbody>
</table>

| Replacing/altering ≥5 luminaires and including 10-49% of the number of luminaires on the site: |
| Luminaire Alterations (§141.0(b)2Li) include projects that do not add to the connected load (see below). This may include adding luminaires to the site, but when in conjunction with the altered luminaires, the connected load is not increased. The added and/or altered luminaires must meet the control requirements of §§130.2(b) and (c) but are not required to show compliance with the wattage allowances. |

| Replacing/altering ≥5 luminaires and including ≥50% of the number of luminaires on the site: |
| Luminaire Alterations (§141.0(b)2Li) include projects that do not add to the connected load (see below). The added and/or altered luminaires must meet the control requirements of §§130.2(b) and (c), and if the project includes altering ≥50% of the number of luminaires on the site, the Prescriptive wattage allowance requirements of §140.7 also apply unless the 40% Reduced Wattage Exception is used. |

| 40% Reduced Wattage Exception includes projects that do not add to the connected load (see below). The added and/or altered luminaires must meet the control requirements of §§130.2(b) and (c), AND the total wattage of the project must be reduced by 40% or more (but does not need to show compliance to wattage allowances). This can include adding luminaires in conjunction with altering existing luminaires, as long as total installed wattage is reduced by 40%. |

| Increasing the connected load of the site: (§141.0(b)2Li) requires that the added and/or altered luminaires meet the control requirements of §§130.2(b) and (c), and the general hardscape and specific lighting prescriptive wattage allowance requirements of §140.7 affected by the alteration. |

### When is the Energy Code Triggered? Example Project Scopes

<table>
<thead>
<tr>
<th>Upgrading 3 luminaires, which is 5% of the total number of luminaires on the site (under the threshold for an alteration)</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Upgrading 3 pathway luminaires, which is 100% of the number of luminaires on the site (under the threshold for an alteration)</td>
<td>No</td>
</tr>
<tr>
<td>Replacing all 50 lamps and ballasts on site with same technology (this is considered a repair)</td>
<td>No</td>
</tr>
<tr>
<td>Rewiring all 50 lamps and ballasts on site with upgraded technology such as LED (as long as the connected load is not increased)</td>
<td>No</td>
</tr>
<tr>
<td>Adding 2 new parking lights and replacing all existing 50 pole heads in which the connected load is not increased and the overall wattage of the site is reduced by 50% (alteration eligible for 40% reduced wattage exception in which only control compliance is required for all new and altered luminaires)</td>
<td>Yes</td>
</tr>
<tr>
<td>Adding 2 new parking lights and with no changes to the existing 50 luminaires in which the connected load is increased (alteration that requires controls for new luminaires and Prescriptive general hardscape wattage compliance for all luminaires)</td>
<td>Yes</td>
</tr>
<tr>
<td>Adding new façade lighting, but not changing the general hardscape lighting (alteration that requires controls for new luminaires and compliance to the Prescriptive “specific application” wattage allowance)</td>
<td>Yes</td>
</tr>
</tbody>
</table>
### Alteration Compliance Method Used

<table>
<thead>
<tr>
<th>Acceptance testing</th>
<th>Mandatory Lighting Controls Required</th>
<th>Prescriptive Wattage Allowance per §140.7 Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alteration compliance requirements of §130.4 are not required for alterations where lighting controls are added/altered to control ≤20 luminaires for the entire permitted project (indoor, outdoor and sign lighting)</td>
<td>Luminaire Cutoff (i.e., BUG) when ≥6,200 lumens §130.2(b)</td>
<td>Daylight Available §130.2(c)1</td>
</tr>
<tr>
<td>Altering &lt;10% / ≤4 Luminaires</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>Altering 10%-49% / ≥5 Luminaires</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>Altering ≥50% / ≥5 Luminaires not using reduced wattage exception</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>Altering ≥50% / ≥5 Luminaires using reduced wattage exception</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>Adding to the Connected Load</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Outdoor Lighting Control

#### Luminaire Cutoff (BUG) §130.2(b)
- Excludes signs, façade, public monuments, vertical surfaces of bridges, temporary lighting, public right-of-way, attached to multifamily/hotel/motel and controlled from dwelling unit/guest room, and when health & safety statute/ordinance/regulation does not permit lighting to be cutoff
- Excludes replacement of existing pole mounted luminaires when all the following apply:
  - Existing luminaire does not meet BUG requirements AND
  - Existing poles spacing greater than 6 times the mounting height AND
  - No new poles being added AND
  - No rewiring to existing poles AND
  - Connected load is not increased

#### Daylight Availability §130.2(c)1
- Requires controls that can automatically turn the luminaire off when daylight is available.

#### Automatic Scheduling §130.2(c)2
- Requires that there be automatic controls that can do all of the following:
  - Reduce outdoor lighting power by at least 50% but no more than 90% AND
  - Allow the ability to turn lighting off per scheduled unoccupied periods AND
  - Allow for the ability to schedule a minimum of 2 periods during the night at different lighting levels
    - Acceptance testing will require these 2 periods be programmed, or a “default” schedule will be programmed by the Acceptance Test Technician (ATT)

#### Motion Sensing §130.2(c)3
- Requires controls when the luminaire is within 24 ft² of the ground and exceeds 40W for each luminaire.
  - Must provide the following functionality:
    - Reduce outdoor lighting power of each luminaire by at least 50% but no more than 90% AND
    - Capable of turning lighting off during unoccupied periods AND
    - Be able to reduce or turn off within 15 minutes of the space being vacated, then return to programmed lighting level when area becomes occupied
  - No more than 1,500W may be controlled with one sensor
  - Required for building façade, ornamental hardscape or outdoor dining using bilaterally symmetric distribution (i.e., up & down wall packs) when the luminaire is within 24 ft²
    - Not required for these lighting applications if >24 ft² or when not using bilateral wall packs no matter the height
  - Excludes lighting applications listed in §140.7(a)
  - When luminaire is subject to health & safety statute/ordinance/regulations, the time-out period may be longer than 15 minutes and the minimum dimming level can be above 50%, as needed to comply

*Operation of existing controls must not be removed or altered with lighting alteration project.*

*Lighting system and equipment requirements of §130.0 apply to all alteration projects.*
